

# APTUS CAPITAL ADVISORS

**Aptus Drawdown Managed Equity ETF**  
Trading Symbol: ADME

**Summary Prospectus**  
August 31, 2023

Listed on Cboe BZX Exchange, Inc.

[www.aptusetfs.com](http://www.aptusetfs.com)

Before you invest, you may want to review the Fund’s Prospectus and Statement of Additional Information (“SAI”), which contain more information about the Fund and its risks. The current Prospectus and SAI, each dated August 31, 2023, as supplemented from time to time, are incorporated by reference into this Summary Prospectus. You can find the Fund’s Prospectus, reports to shareholders, and other information about the Fund online at [www.aptusetfs.com/funds/adme](http://www.aptusetfs.com/funds/adme). You can also get this information at no cost by calling 1-800-617-0004 or by sending an e-mail request to [ETF@usbank.com](mailto:ETF@usbank.com).

## Investment Objective

The Aptus Drawdown Managed Equity ETF (the “Fund”) seeks capital appreciation with downside protection.

## Fees and Expenses of the Fund

The following table describes the fees and expenses you may pay if you buy, hold, and sell shares of the Fund (“Shares”). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

### Annual Fund Operating Expenses

*(expenses that you pay each year as a percentage of the value of your investment)*

Management Fees	0.79%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses	0.00%
<b>Total Annual Fund Operating Expenses</b>	<b>0.79%</b>

## Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then continue to hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
\$81	\$252	\$439	\$978

## Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the Example, affect the Fund’s performance. For the fiscal year ended April 30, 2023, the Fund’s portfolio turnover rate was 64% of the average value of its portfolio.

## Principal Investment Strategy

The Fund is an actively managed exchange-traded fund (“ETF”) that seeks to achieve its objective principally by investing in a portfolio of U.S.-listed equity securities, while limiting downside risk by purchasing exchange-listed put options on one or more of such equity securities or on broad-based indexes or ETFs that track the performance of the U.S. equity market. Under normal circumstances, at least 80% of the Fund’s net assets (plus borrowings for investment purposes) will be invested in equity securities.

The equity component of the Fund’s portfolio is comprised of U.S.-listed common stocks of any market capitalization, real estate investment trusts (“REITs”), and American Depositary Receipts (“ADRs”). Aptus Capital Advisors, LLC, the Fund’s investment adviser (“Aptus” or the “Adviser”), generally selects the equity securities for the Fund based on an analysis of each company’s fundamental and momentum characteristics to try to identify attractive opportunities for growth. The Adviser’s proprietary analysis is built from a “yield plus growth” framework, which takes into account fundamental characteristics such as yield, growth, and valuation,

along with momentum, to identify attractive securities. Typically, such securities will have either an attractive combination of yield plus growth relative to the overall market and/or strong momentum relative to the overall market.

The Adviser seeks to limit the Fund's exposure to equity market declines primarily by purchasing exchange-listed put options on individual equity securities or on one or more equity indexes or ETFs (each, a "reference asset") that track a portfolio of U.S. equity securities ("Equity Puts"). A put option gives the purchaser the right to sell shares of the reference asset at a specified price ("strike price") prior to a specified date ("expiration date"). The purchaser pays a cost (premium) to purchase the put option. In the event the reference asset declines in value below the strike price and the holder exercises its put option, the holder will be entitled to receive the difference between the value of the reference asset and the strike price (which gain is offset by the premium originally paid by the holder), and in the event the reference asset closes above the strike price as of the expiration date, the put option may end up worthless and the holder's loss is limited to the amount of premium it paid. The Adviser may purchase Equity Puts that are at-the-money, near-the-money, or out-of-the-money (also known as a "tail hedge"), and the Adviser will actively manage the Fund's Equity Puts as markets move or events occur (e.g., earnings announcements) to roll forward expiration dates or to increase or decrease market exposure. The Adviser generally expects to invest less than 5% of the Fund's net assets in Equity Puts at the time of investment.

In addition to purchasing Equity Puts, the Adviser may write (sell) covered Equity Puts. A written (sold) put option gives the seller the obligation to buy shares of the reference asset at a strike price until the expiration date. The writer (seller) of the put option receives an amount (premium) for writing (selling) the option. In the event the reference asset declines in value below the strike price and the holder exercises the put option, the writer (seller) of the put option will have to pay the difference between the value of the reference asset and the strike price or deliver the reference asset (which loss is offset by the premium initially received), and in the event the reference asset appreciates in value, the put option may end up worthless and the writer (seller) of the put option retains the premium. The put options written by the Fund are considered "covered" when the Fund owns at least an equivalent number of put options on the same reference asset with the same expiration date and a higher strike price at the time it sells the options or the Fund segregates cash or liquid assets with a value at least equal to the exercise price of the put option.

The Adviser also may purchase or write (sell) covered exchange-listed call options on individual equity securities or on one or more equity indexes or ETFs (each, a "reference asset") that track a portfolio of U.S. equity securities ("Equity Calls"). A call option gives the purchaser the right to purchase shares of the reference asset at a specified strike price prior to a specified expiration date. The purchaser pays a cost (premium) to purchase the call option. In the event the reference asset appreciates in value, the value of the call option will generally increase, and in the event the reference asset declines in value, the call option may end up worthless and the premium may be lost.

A written (sold) call option gives the seller the obligation to sell shares of the reference asset at a strike price until the expiration date. The writer (seller) of the call option receives an amount (premium) for writing (selling) the option. In the event the reference asset appreciates above the strike price and the holder exercises the call option, the writer (seller) of the call option will have to pay the difference between the value of the reference asset and the strike price or deliver the reference asset (which loss is offset by the premium initially received), and in the event the reference asset declines in value, the call option may end up worthless and the writer (seller) of the call option retains the premium. The call options written by the Fund are "covered" because the Fund owns the reference asset at the time it sells the option.

In addition to or in lieu of such Equity Puts or Equity Calls, the Adviser may utilize a combination of purchased and written (sold) put or call options (known as a "spread") on individual equity securities, one or more equity indexes or ETFs, or the Cboe Volatility Index® (the "VIX® Index"). The VIX Index reflects a calculation designed to produce a measure of constant, 30-day expected volatility of the U.S. stock market, derived from real-time, mid-quote prices of S&P 500® Index call and put options. The Fund may use VIX call options as a hedge when the market is experiencing a rapid change in volatility, and the Adviser generally expects to invest less than 1% of the Fund's net assets in VIX Index call and put options at the time of investment.

As of July 31, 2023, the Fund invested a significant portion of its assets in the information technology and consumer sectors; however, the Fund's sector exposure may change from time to time.

### **Principal Investment Risks**

The principal risks of investing in the Fund are summarized below. The principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with other funds. Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which it appears. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value per share ("NAV"), trading price, yield, total return and/or ability to meet its objectives. For more information about the risks of investing in the Fund, see the section in the Fund's Prospectus titled "Additional Information About the Funds."

- **Depository Receipt Risk.** Depository Receipts involve risks similar to those associated with investments in foreign securities, such as changes in political or economic conditions of other countries and changes in the exchange rates of foreign currencies. Depository Receipts listed on U.S. exchanges are issued by banks or trust companies and entitle the holder to all

dividends and capital gains that are paid out on the underlying foreign shares (“Underlying Shares”). When the Fund invests in Depositary Receipts as a substitute for an investment directly in the Underlying Shares, the Fund is exposed to the risk that the Depositary Receipts may not provide a return that corresponds precisely with that of the Underlying Shares.

- **Derivative Securities Risk.** The Fund invests in options that derive their performance from the performance of an underlying reference asset. Derivatives, such as the options in which the Fund invests, can be volatile and involve various types and degrees of risks, depending upon the characteristics of a particular derivative. Derivatives may entail investment exposures that are greater than their cost would suggest, meaning that a small investment in a derivative could have a substantial impact on the performance of the Fund. The Fund could experience a loss if its derivatives do not perform as anticipated, the derivatives are not correlated with the performance of their reference asset, or if the Fund is unable to purchase or liquidate a position because of an illiquid secondary market. The market for many derivatives is, or suddenly can become, illiquid. Changes in liquidity may result in significant, rapid, and unpredictable changes in the prices for derivatives.
- **Equity Market Risk.** The equity securities held in the Fund’s portfolio may experience sudden, unpredictable drops in value or long periods of decline in value. This may occur because of factors that affect securities markets generally or factors affecting specific issuers, industries, or sectors in which the Fund invests. Common stocks are generally exposed to greater risk than other types of securities, such as preferred stock and debt obligations, because common stockholders generally have inferior rights to receive payment from issuers. In addition, local, regional or global events such as war, including Russia’s invasion of Ukraine, acts of terrorism, spread of infectious diseases or other public health issues (such as the global pandemic caused by the COVID-19 virus), recessions, rising inflation, or other events could have a significant negative impact on the Fund and its investments. Such events may affect certain geographic regions, countries, sectors and industries more significantly than others. Such events could adversely affect the prices and liquidity of the Fund’s portfolio securities or other instruments and could result in disruptions in the trading markets.
- **ETF Risks.** The Fund is an ETF, and, as a result of an ETF’s structure, it is exposed to the following risks:
  - *Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as Authorized Participants (“APs”). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
  - *Costs of Buying or Selling Shares.* Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.
  - *Shares May Trade at Prices Other Than NAV.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund’s NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.
  - *Trading.* Although Shares are listed for trading on Cboe BZX Exchange, Inc. (the “Exchange”) and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than Shares, and this could lead to differences between the market price of the Shares and the underlying value of those Shares.
- **Foreign Investment Risk.** Because of the Fund’s investment in ADRs, changes in foreign economies and political climates are more likely to affect the Fund than a fund that invests exclusively in U.S. companies. There may be less government supervision of foreign markets, resulting in non-uniform accounting practices and less publicly available information. The value of foreign investments may be affected by changes in exchange control regulations, application of foreign tax laws (including withholding tax), changes in governmental administration or economic or monetary policy (in this country or abroad) or changed circumstances in dealings between nations.
- **Management Risk.** The Fund is actively managed and may not meet its investment objective based on the Adviser’s success or failure to implement investment strategies for the Fund.

- **Market Capitalization Risk.**

- *Large-Capitalization Investing.* The securities of large-capitalization companies may be relatively mature compared to smaller companies and therefore subject to slower growth during times of economic expansion. Large-capitalization companies may also be unable to respond quickly to new competitive challenges, such as changes in technology and consumer tastes.
- *Mid-Capitalization Investing.* The securities of mid-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of large-capitalization companies, but they may also be subject to slower growth than small-capitalization companies during times of economic expansion. The securities of mid-capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than large capitalization stocks or the stock market as a whole, but they may also be nimbler and more responsive to new challenges than large-capitalization companies. Some mid-capitalization companies have limited product lines, markets, financial resources, and management personnel and tend to concentrate on fewer geographical markets relative to large-capitalization companies.
- *Small-Capitalization Investing.* The securities of small-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of larger-capitalization companies. The securities of small-capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than larger capitalization stocks or the stock market as a whole. Some small capitalization companies have limited product lines, markets, and financial and managerial resources and tend to concentrate on fewer geographical markets relative to larger capitalization companies. There is typically less publicly available information concerning smaller-capitalization companies than for larger, more established companies. Small-capitalization companies also may be particularly sensitive to changes in interest rates, government regulation, borrowing costs and earnings.

- **Options Risk.** Selling (writing) and buying options are speculative activities and entail greater than ordinary investment risks. Options enable the Fund to gain exposure that is significantly greater than the premium paid or received. Consequently, the value of such options can be volatile, and a small investment in options can have a large impact on the performance of the Fund. The Fund's use of call and put options can lead to losses because of adverse movements in the price or value of the reference asset, which may be magnified by certain features of the options. When selling an option, the Fund will receive a premium; however, this premium may not be enough to offset a loss incurred by the Fund if the price of the underlying asset is below the strike price for a put option, or above the strike price for a call option, by an amount equal to or greater than the premium. Purchasing of put or call options involves the payment of premiums, which may adversely affect the Fund's performance. Purchased put or call options may expire worthless resulting in the Fund's loss of the premium it paid for the option.

- **REIT Investment Risk.** Investments in REITs involve unique risks. REITs may have limited financial resources, may trade less frequently and in limited volume, and may be more volatile than other securities. REITs may be affected by changes in the value of their underlying properties or mortgages or by defaults by their borrowers or tenants. Furthermore, these entities depend upon specialized management skills, have limited diversification and are, therefore, subject to risks inherent in financing a limited number of projects. In addition, the performance of a U.S. REIT may be affected by changes in the tax laws or by its failure to qualify for tax-free pass-through of income.

- **Sector Risk.** To the extent the Fund invests more heavily in particular sectors of the economy, its performance will be especially sensitive to developments that significantly affect those sectors.

- *Consumer Sectors Risk.* The success of consumer product manufacturers and retailers is tied closely to the performance of domestic and international economies, interest rates, exchange rates, competition, consumer confidence, changes in demographics and consumer preferences. Companies in the consumer staples sector, such as companies that produce or sell food, beverage, and drug retail or other household items, may be adversely impacted by changes in global and economic conditions, rising energy prices, and changes in the supply or price of commodities. Companies in the consumer discretionary sector, such as automobile, textile, retail, and media companies, depend heavily on disposable household income and consumer spending, and may be strongly affected by social trends and marketing campaigns. These companies may be subject to severe competition, which may have an adverse impact on their profitability.
- *Information Technology Sector Risk.* Market or economic factors impacting information technology companies and companies that rely heavily on technological advances could have a significant effect on the value of the Fund's investments. The value of stocks of information technology companies and companies that rely heavily on technology is particularly vulnerable to rapid changes in technology product cycles, rapid product obsolescence, government regulation and competition, both domestically and internationally, including competition from foreign competitors with lower production costs. Stocks of information technology companies and companies that rely heavily on technology, especially those of smaller, less-seasoned companies, tend to be more volatile than the overall market. Information technology

companies are heavily dependent on patent and intellectual property rights, the loss or impairment of which may adversely affect profitability.

- **Tail Hedge Risk.** The Fund may purchase put options designed to mitigate the Fund’s exposure to significant declines in the broader U.S. equity market. However, there is a risk that the Fund will experience a loss as a result of engaging in such options transactions. Moreover, there can be no assurance that the tail hedge will be successful in protecting against all or any declines in the value of the Fund’s portfolio because the amount of protection provided by the put options purchased by the Fund and the price of such protection will be dictated by prevailing market sentiment at the time the tail hedge is triggered. Additionally, the tail hedge will not protect against declines in the value of the Fund’s portfolio where such declines are based on factors other than general stock market fluctuations.
- **Tax Risk.** The use of derivatives strategies, such as writing (selling) and purchasing options, involves complex rules that will determine for income tax purposes the amount, character and timing of recognition of the gains and losses the Fund realizes in connection therewith. The Fund expects to generate premiums from its sale of options. These premiums typically will result in short-term capital gains for federal income tax purposes. In addition, equity securities that are hedged with put options may not be eligible for long-term capital gains tax treatment. The Fund is not designed for investors seeking a tax efficient investment.

### Performance

The following performance information indicates some of the risks of investing in the Fund. The bar chart shows the Fund’s performance for calendar years ended December 31. The table illustrates how the Fund’s average annual returns for the 1-year, 5-year, and since inception periods compare with those of a broad measure of market performance. The Fund’s past performance, before and after taxes, does not necessarily indicate how it will perform in the future. Updated performance information is available on the Fund’s website at [www.aptuasetfs.com/funds/adme](http://www.aptuasetfs.com/funds/adme).

Prior to November 8, 2019, the Fund operated as an index-based ETF that sought to track the performance of the Aptus Behavioral Momentum Index. Consequently, performance for periods prior to November 8, 2019 does not reflect the Fund’s current investment strategy as an actively-managed ETF. The Fund’s performance may have differed if the Fund’s current strategy had been in place.

**Calendar Year Total Return**

For the year-to-date period ended June 30, 2023, the Fund’s total return was 8.81%. During the period of time shown in the bar chart, the Fund’s highest quarterly return was 13.97% for the quarter ended June 30, 2020, and the lowest quarterly return was -22.83% for the quarter ended December 31, 2018.

## Average Annual Total Returns for the Period Ended December 31, 2022

<b>Aptus Drawdown Managed Equity ETF</b>	<b>1 Year</b>	<b>5 Years</b>	<b>Since Inception (6/8/2016)</b>
Return Before Taxes	-21.72%	2.71%	5.24%
Return After Taxes on Distributions	-21.86%	2.56%	5.09%
Return After Taxes on Distributions and Sale of Shares	-12.76%	2.08%	4.11%
<b>S&amp;P 500® Index</b> (reflects no deduction for fees, expenses, or taxes)	-18.11%	9.42%	11.50%

After-tax returns are calculated using the historical highest individual federal marginal income tax rates during the period covered by the table above and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown. After-tax returns shown are not relevant to investors who hold their Shares through tax-deferred arrangements such as an individual retirement account ("IRA") or other tax-advantaged accounts. In certain cases, the figure representing "Return After Taxes on Distributions and Sale of Shares" may be higher than the other return figures for the same period. A higher after-tax return results when a capital loss occurs upon redemption and provides an assumed tax deduction that benefits the investor.

### Management

#### *Investment Adviser*

Aptus Capital Advisors, LLC serves as investment adviser to the Fund.

#### *Portfolio Managers*

John D. ("JD") Gardner, CFA, Chief Investment Officer and Managing Member at the Adviser, has been a portfolio manager of the Fund since August 2017.

John Luke Tyner, CFA, Portfolio Manager and Analyst at the Adviser, has been a portfolio manager of the Fund since August 2020.

David Wagner III, CFA, Portfolio Manager and Analyst at the Adviser, has been a portfolio manager of the Fund since August 2020.

### Purchase and Sale of Shares

Shares are listed on the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only APs (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities and/or a designated amount of U.S. cash.

Investors may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (bid) and the lowest price a seller is willing to accept for Shares (ask) when buying or selling Shares in the secondary market (the "bid-ask spread"). Recent information about the Fund, including its NAV, market price, premiums and discounts, and bid-ask spreads is available on the Fund's website at [www.aptuasetfs.com/funds/adme](http://www.aptuasetfs.com/funds/adme).

### Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is in an IRA or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

### Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an "Intermediary"), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange traded products, including the Fund, or for other activities, such as marketing, educational training or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary's website for more information.
