APTUS CAPITAL ADVISORS

Aptus International Enhanced Yield ETF
Trading Symbol: IDUB

Summary Prospectus
August 28, 2026

Listed on Cboe BZX Exchange, Inc.

www.aptusetfs.com

Before you invest, you may want to review the Fund's Prospectus and Statement of Additional Information ("SAI"), which contain more information about the Fund and its risks. The current Prospectus and SAI, each dated August 28, 2026, as supplemented from time to time, are incorporated by reference into this Summary Prospectus. You can find the Fund's Prospectus, reports to shareholders, and other information about the Fund online at www.aptusetfs.com/idub/. You can also get this information at no cost by calling 1-800-617-0004 or by sending an e-mail request to ETF@usbank.com.

Investment Objective

The Aptus International Enhanced Yield ETF (the "Fund") seeks capital appreciation and current income.

Fees and Expenses of the Fund

The following table describes the fees and expenses you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.39%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses	0.00%
Acquired Fund Fees and Expenses[1]	0.05%
Total Annual Fund Operating Expenses[1]	**0.44%**

[1] Acquired Fund Fees and Expenses are the indirect costs of investing in other investment companies. Total Annual Fund Operating Expenses do not correlate to the expense ratios in the Fund's Financial Highlights because the Financial Highlights include only the direct operating expenses incurred by the Fund and exclude Acquired Fund Fees and Expenses.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest $10,000 in the Fund for the time periods indicated and then continue to hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	**3 Years**	**5 Years**	**10 Years**
$45	$141	$246	$555

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the Example, affect the Fund's performance. For the fiscal year ended April 30, 2026, the Fund's portfolio turnover rate was 151% of the average value of its portfolio.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks to achieve its objective through a combination of equity securities and total return swaps. The Fund invests primarily in a portfolio of other ETFs that invest in equity securities of non-U.S. (international) companies in developed and emerging markets throughout the world (the "Equity Strategy") and invests the remainder of its assets in total return swaps (the "Total Return Swaps Strategy"). The Adviser may actively and frequently purchase and sell investments for the Fund.

Equity Strategy

Through its Equity Strategy, under normal circumstances, the Fund invests at least 80% of its assets in other ETFs that invest in the equity securities of non-U.S. companies. The Fund may also invest in common stocks and depositary receipts as part of its Equity Strategy, although such depositary receipts will generally comprise less than 20% of the Fund's net assets.

Aptus Capital Advisors, LLC, the Fund's investment adviser ("Aptus" or the "Adviser"), generally expects to expose the Fund to a mix of developed and emerging markets. The Fund's Equity Strategy seeks exposure to mid- and large-capitalization stocks. Aptus selects the ETFs in which the Fund invests based on a variety of characteristics, including the particular geographic exposure provided by the portfolio of securities held by the ETF, the cost to invest in and trade the ETF's shares, and the size of the ETF, among others. Aptus selects the individual common stocks and depositary receipts in which the Fund invests based on a company's fundamental and momentum characteristics to try to identify attractive opportunities for growth.

Total Return Swaps Strategy

The Fund invests in total return swaps that implement a systematic trading strategy (STS), with the primary goal of increasing the Fund's total return. A total return swap is an agreement whereby one party contracts to make periodic payments to another party based on the change in market value of certain underlying assets (or trading strategy) in exchange for receiving periodic payments from the other party based on a fixed or variable interest rate or the total return of other underlying assets. An STS implemented by a total return swap is a rules-based investment approach to making trade decisions based on pre-established parameters. The Fund may invest in total return swaps that employ STSs using a combination of options and/or futures contracts on equity indexes, fixed income indexes, and/or volatility indexes (*e.g.*, the Cboe Volatility Index, also known as "VIX"). Trading in these instruments may include selling (writing) and/or purchasing put or call options and/or entering into long or short futures contracts to implement the desired exposures in line with the STS parameters.

The Fund may hold Treasury Bills to provide a return on cash used as collateral for the total return swaps.

The Fund seeks to maintain relatively stable quarterly distributions at a rate that is approximately double the distribution rate of its broad-based securities market benchmark, the MSCI AC World Index ex USA (Net). Although the Adviser will target this distribution rate, the Fund's actual distribution rate will be based on a combination of dividends generated by the Fund's underlying equity portfolio, the appreciation of the Fund's equity holdings, and income from U.S. Government securities. As a result, the amount of income earned by the Fund will vary from quarter-to-quarter, and the Fund may pay out a return of capital to meet those targets if quarterly distributions exceed the current income generated by the Fund. In addition, the Fund does not guarantee and there can be no assurance that distributions will always be paid or will be paid at a relatively stable level in line with the Adviser's internal targets.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. The principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with other funds. Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which it appears. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value per share ("NAV"), trading price, yield, total return and/or ability to meet its objectives. For more information about the risks of investing in the Fund, see the section in the Fund's Prospectus titled "Additional Information About the Funds".

- **Capital Controls and Sanctions Risk**. Economic conditions, such as volatile currency exchange rates and interest rates, political events, military action and other conditions may, without prior warning, lead to foreign government intervention (including intervention by the U.S. government with respect to foreign governments, economic sectors, foreign companies and related securities and interests) and the imposition of capital controls and/or sanctions, which may also include retaliatory actions of one government against another government, such as seizure of assets. Capital controls and/or sanctions include the prohibition of, or restrictions on, the ability to transfer currency, securities or other assets. Capital controls and/or sanctions may also impact the ability of the Fund to buy, sell or otherwise transfer securities or currency, negatively impact the value and/or liquidity of such instruments, adversely affect the trading market and price for Shares, and cause the Fund to decline in value.
- **Counterparty Risk.** Fund transactions involving a counterparty are subject to the risk that the counterparty will not fulfill its obligation to the Fund. Counterparty risk may arise because of the counterparty's financial condition (*i.e.*, financial difficulties, bankruptcy, or insolvency), market activities and developments, or other reasons, whether foreseen or not. A counterparty's inability to fulfill its obligation may result in significant financial loss to the Fund. The Fund may be unable to recover its investment from the counterparty or may obtain a limited recovery, and/or recovery may be delayed.
- **Currency Exchange Rate Risk**. The Fund invests primarily in other ETFs that have exposure to securities denominated in non-U.S. currencies or in securities that provide exposure to such currencies. Changes in currency exchange rates and the relative value of non-U.S. currencies will affect the value of the Fund's investment and the value of your Shares. Currency exchange rates can be very volatile and can change quickly and unpredictably. As a result, the value of an investment in the Fund may change quickly and without warning and you may lose money.

- **Depositary Receipt Risk**. Depositary receipts involve risks similar to those associated with investments in foreign securities, such as changes in political or economic conditions of other countries and changes in the exchange rates of foreign currencies. Depositary receipts listed on U.S. exchanges are issued by banks or trust companies and entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares ("Underlying Shares"). When the Fund invests in Depositary receipts as a substitute for an investment directly in the Underlying Shares, the Fund is exposed to the risk that the Depositary receipts may not provide a return that corresponds precisely with that of the Underlying Shares.
- **Derivatives Risk**. Derivatives, such as the options, futures contracts, and swaps in which the Fund invests, can be volatile and involve various types and degrees of risks, depending upon the characteristics of a particular derivative. Derivatives may entail investment exposures that are greater than their cost would suggest, meaning that a small investment in a derivative could have a substantial impact on the performance of the Fund. The Fund could experience a loss if its derivatives do not perform as anticipated, the derivatives are not correlated with the performance of their underlying security, or if the Fund is unable to purchase or liquidate a position because of an illiquid secondary market. The market for many derivatives is, or suddenly can become, illiquid. Changes in liquidity may result in significant, rapid, and unpredictable changes in the prices for derivatives.
    - *Futures Contracts Risk*. The Fund will be exposed to the risks of futures contracts through the STSs implemented by the Fund's total return swaps. A decision as to whether, when, and how to use futures involves the exercise of skill and judgment and even a well-conceived futures transaction may be unsuccessful because of market behavior or unexpected events. In addition to the risks associated with all derivatives, the prices of futures can be highly volatile, using futures can lower total return, and the potential loss from futures can exceed the initial investment in such contracts and could be unlimited.
    - *Options Risk.* The Fund will be exposed to the risks of call and put options through the STSs implemented by the Fund's total return swaps. Purchasing and selling (writing) options are speculative activities and entail greater than ordinary investment risks. Options enable the Fund to purchase exposure that is significantly greater than the premium paid. Consequently, the value of such options can be volatile, and a small investment in options can have a large impact on the performance of the Fund. The Fund risks losing all or part of the cash paid (premium) for purchasing options. Even a small decline in the value of a reference asset underlying call options or a small increase in the value of a reference asset underlying put options can result in the entire investment in such options being lost. Additionally, the value of the option may be lost if the Adviser fails to exercise such option at or prior to its expiration. Further, writing option contracts can result in losses that exceed the seller's initial investment and may lead to additional turnover and higher tax liability. The Fund will incur a loss as a result of writing (selling) options if the price of the written option instrument increases in value between the date the Fund writes the option and the date on which the Fund purchases an offsetting position or exits the option.
    - *Swap Risk.* The Fund may enter into derivatives called swaps. Swaps are entered into primarily with major global financial institutions for specified periods. The swaps in which the Fund invests are generally traded in the over-the-counter ("OTC") market, which generally has less transparency than exchange-traded derivatives instruments. Risks associated with swap agreements include failure of the counterparties to perform under the contract's terms, changes in the returns of the underlying instruments, and the possible lack of liquidity with respect to the swap agreements. The Fund bears the risk of loss of the amount expected to be received under a swap agreement in the event of the bankruptcy or default of a swap agreement counterparty.
- **Emerging Markets Risk.** Investments in securities and instruments traded in developing or emerging markets, or that provide exposure to such securities or markets, can involve additional risks relating to political, economic, or regulatory conditions not associated with investments in U.S. securities and instruments or investments in more developed international markets. Such conditions may impact the ability of the Fund to buy, sell or otherwise transfer securities, adversely affect the trading market and price for Shares and cause the Fund to decline in value. Less information may be available about companies in emerging markets than in developed markets because such emerging markets companies may not be subject to accounting, auditing, and financial reporting standards or to other regulatory practices required by U.S. companies.
- **Equity Market Risk**. The equity securities held in the Fund's portfolio may experience sudden, unpredictable drops in value or long periods of decline in value. This may occur because of factors that affect securities markets generally or factors affecting specific issuers, industries, or sectors in which the Fund invests. Common stocks are generally exposed to greater risk than other types of securities, such as preferred stock and debt obligations, because common stockholders generally have inferior rights to receive payment from issuers. In addition, local, regional or global events such as war, including Russia's invasion of Ukraine, acts of terrorism, market volatility related to global trade policy and the imposition of tariffs, the spread of infectious diseases or other public health issues (such as the global pandemic caused by the COVID-19 virus), recessions, rising inflation, or other events could have a significant negative impact on the Fund and its investments. Such events may affect certain geographic regions, countries, sectors and industries more significantly than others. Such events could adversely affect the prices and liquidity of the Fund's portfolio securities or other instruments and could result in disruptions in the trading markets.

- **ETF Risks.** The Fund is an ETF, and, as a result of an ETF's structure, it is exposed to the following risks:
  - *Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as Authorized Participants ("APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
  - *Cash Redemption Risk*. The Fund's investment strategy may require it to redeem shares for cash or to otherwise include cash as part of its redemption proceeds. The Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used.
  - *Costs of Buying or Selling Shares.* Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.
  - *Shares May Trade at Prices Other Than NAV*. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant. Because the Fund's investments have exposure to securities that may trade on foreign exchanges that are closed when the Fund's primary listing exchange is open, there are likely to be deviations between the current price of a security and the security's last quoted price from the closed foreign market. This may result in premiums and discounts that are greater than those experienced by domestic ETFs.
  - *Trading*. Although Shares are listed for trading on Cboe BZX Exchange, Inc. (the "Exchange") and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. There can be no assurance that an active trading market for such Shares will develop or be maintained. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Shares, and this could lead to differences between the market price of the Shares and the underlying value of those Shares.
- **Foreign Investment Risk**. Investments in non-U.S. securities involve certain risks that may not be present with investments in U.S. securities. For example, investments in non-U.S. securities may be subject to risk of loss due to foreign currency fluctuations or to political or economic instability. Investments in non-U.S. securities also may be subject to withholding or other taxes and may be subject to additional trading, settlement, custodial, and operational risks. These and other factors can make investments in the Fund more volatile and potentially less liquid than other types of investments. Companies in many foreign markets are not subject to the same degree of regulatory requirements, accounting standards or auditor oversight as companies in the U.S., and as a result, information about the securities in which the Fund invests may be less reliable or complete. Foreign markets often have less reliable securities valuations and greater risk associated with the custody of securities than the U.S. There may be significant obstacles to obtaining information necessary for investigations into or litigation against companies and shareholders may have limited legal remedies.
- **Geographic Investment Risk**. To the extent the Fund invests a significant portion of its assets in the securities of companies of a single country or region, it is more likely to be impacted by events or conditions affecting that country or region.
- **Geopolitical Risk.** Some countries and regions in which the Fund invests have experienced security concerns, war or threats of war and aggression, terrorism, economic uncertainty, natural and environmental disasters and/or systemic market dislocations that have led, and in the future may lead, to increased short-term market volatility and may have adverse long-term effects on the U.S. and world economies and markets generally. Such geopolitical and other events may also disrupt securities markets and, during such market disruptions, the Fund's exposure to the other risks described herein will likely increase. Each of the foregoing may negatively impact the Fund's investments.
- **Management Risk**. The Fund is actively managed and may not meet its investment objective based on the Adviser's success or failure to implement investment strategies for the Fund. In addition, the Fund does not guarantee and there can be no assurance that distributions will always be paid or will be paid at a relatively stable level in line with the Adviser's internal targets.

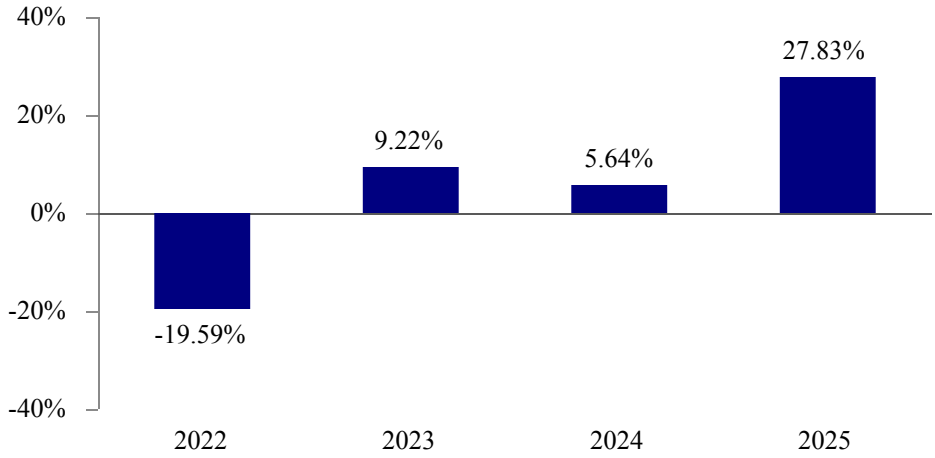
- **Market Capitalization Risk**.
  - *Large-Capitalization Investing Risk*. The Fund may invest in the securities of large-capitalization companies. The securities of large-capitalization companies may be relatively mature compared to smaller companies and therefore subject to slower growth during times of economic expansion. Large-capitalization companies may also be unable to respond quickly to new competitive challenges, such as changes in technology and consumer tastes.
  - *Mid-Capitalization Investing Risk.* The Fund may invest in the securities of mid-capitalization companies. The securities of mid-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of large-capitalization companies, but they may also be subject to slower growth than small-capitalization companies during times of economic expansion. The securities of mid-capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than large capitalization stocks or the stock market as a whole. Mid-capitalization companies may be particularly sensitive to changes in interest rates, government regulation, borrowing costs, and earnings.
- **Other Investment Companies Risk.** The risks of investing in other ETFs typically reflect the risks associated with the investment strategies of the other ETFs and the types of instruments in which the other ETFs invest. By investing in another ETF, the Fund becomes a shareholder of that ETF and bears its proportionate share of the fees and expenses of the other ETF. The Fund may be subject to statutory limits with respect to the amount it can invest in other ETFs, which may adversely affect the Fund's ability to achieve its investment objective. Investments in ETFs are also subject to the "ETF Risks" described above.
- **Return of Capital Risk.** The Fund expects to make distributions regardless of its performance. All or a portion of such distributions may represent a return of capital. A return of capital is the portion of the distribution representing the return of your investment in the Fund. A return of capital is generally tax-free to the extent of a shareholder's basis in the Fund's shares and reduces the shareholder's basis in their shares and results in a higher capital gain or lower capital loss when the shares on which the return of capital distribution was received are sold. After a shareholder's basis in the shares has been reduced to zero, return of capital distributions will be treated as gain from the sale of the shareholder's shares.
- **Volatility Investing Risk**. Significant short-term price movements could adversely impact the performance of the Fund, including any investments that are tied to volatility indexes or volatility-based derivative instruments, such as VIX futures contracts or options. Investments linked to equity market volatility, particularly VIX Index futures contracts or VIX Index options that are close to expiration, can be highly volatile and may experience large losses.

Performance

The following performance information indicates some of the risks of investing in the Fund. The bar chart shows the Fund's performance for the calendar years ended December 31. The table illustrates how the Fund's average annual returns for the 1-year and since inception periods compare with those of a broad measure of market performance. The Fund's past performance, before and after taxes, does not necessarily indicate how it will perform in the future. Updated performance information is available on the Fund's website at www.aptusetfs.com/idub/.

Prior to May 1, 2023, the Fund pursued a strategy by which the Fund purchased and/or wrote call or put options on broad-based, non-US equity indexes or ETFs to limit downside risk, create equity exposure, and/or generate premiums from writing call options. From May 1, 2023, through June 24, 2025, the Fund invested in a combination of equities and equity-linked notes. Consequently, performance for periods prior to June 24, 2025, does not reflect the Fund's current investment objective and principal investment strategies. The Fund's performance may have differed if the Fund's current strategy had been in place.

Calendar Year Total Returns



For the year-to-date period ended June 30, 2026, the Fund's total return was 15.74%.

During the period of time shown in the bar chart, the Fund's highest quarterly return was 9.28% for the quarter ended June 30, 2025, and the lowest quarterly return was -12.48% for the quarter ended June 30, 2022.

Average Annual Total Returns
for the Period Ended December 31, 2025

Aptus International Enhanced Yield ETF	1 Year	Since Inception (July 22, 2021)
Return Before Taxes	27.83%	3.58%
Return After Taxes on Distributions	25.96%	2.26%
Return After Taxes on Distributions and Sale of Shares	17.12%	2.31%
MSCI AC World Index ex USA Net (reflects no deduction for fees, expenses, or taxes)	32.39%	7.12%

After-tax returns are calculated using the historical highest individual federal marginal income tax rates during the period covered by the table above and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown. After-tax returns shown are not relevant to investors who hold their Shares through tax-deferred arrangements such as an individual retirement account ("IRA") or other tax-advantaged accounts. In certain cases, the figure representing "Return After Taxes on Distributions and Sale of Shares" may be higher than the other return figures for the same period. A higher after-tax return results when a capital loss occurs upon redemption and provides an assumed tax deduction that benefits the investor.

Management

Investment Adviser

Aptus Capital Advisors, LLC serves as investment adviser to the Fund.

Portfolio Managers

Each of the following individuals has been a portfolio manager of the Fund since its inception in July 2021:

Mark Callahan, Portfolio Manager and Head of Trading at the Adviser

John D. ("JD") Gardner, Chief Investment Officer and Managing Member at the Adviser

Brad Rapking, CFA, Portfolio Manager and Analyst at the Adviser

John Luke Tyner, Portfolio Manager and Analyst at the Adviser

David Wagner III, CFA, Portfolio Manager and Analyst at the Adviser

Purchase and Sale of Shares

Shares are listed on the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only APs (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities and/or a designated amount of U.S. cash.

Investors may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (bid) and the lowest price a seller is willing to accept for Shares (ask) when buying or selling Shares in the secondary market (the "bid-ask spread"). Recent information about the Fund, including its NAV, market price, premiums and discounts, and bid-ask spreads is available on the Fund's website at www.aptusetfs.com/idub/.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is in an IRA or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts. The Fund seeks to maintain relatively stable quarterly distributions; however, because the amount of income earned by the Fund varies from quarter-to-quarter, the Fund's distributions may be more or less than the actual amount of income earned in that period and may include return of capital.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an "Intermediary"), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange traded products, including the Fund, or for other activities, such as marketing, educational training or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary's website for more information.
